To Whom it May Concern,

I'm writing to express my enthusiastic recommendation of Arch Silverstein as a Software Developer. I mentored Arch during his summer internship at the New York Stem Cell Foundation in 2024. During his time at NYSCF, Arch demonstrated exceptional technical and interpersonal skills that will make him an asset to any software development team.

Arch and another intern were tasked with building an interface that would enable scientists to run a new experiment on the Hamilton robots in our Stem Cell research lab. Arch built the new feature using our tech stack, gaining real world experience with React, Typescript, Material UI, and Redux. I was impressed with how fast Arch got up to speed on our technology and his genuine enthusiasm for learning.

While building the feature, Arch displayed the ability to work well independently and as part of a team. I was pleased at how well Arch and his fellow intern divided up their work and used Github to track code across multiple branches without oversight. Arch also proved to be an efficient problem solver, going above and beyond the original project requirements to add additional "nice to have" features. In addition to his coding responsibilities, Arch showed a keen knack for project management and stayed organized in the face of changing requirements from multiple product stakeholders and end users.

I'm confident that Arch's problem solving skills and collaborative mindset will set him up for success in whatever software development role he chooses to pursue. You will not regret hiring him. Please feel free to contact me if you'd like to chat about Arch's qualifications in more detail.

Sincerely,

Matthew Green
